TradeZone Performance Review 2023–2024

To: Head of Growth & Head of Seller Operations

From: Ohiole

Date: April 2025

EXECUTIVE SUMMARY

TradeZone overall performance grew between 2023 and 2024 across all five states (Lagos, FCT, Rivers, Oyo and Kano) with orders growing from 22 in Q1 2023 to1,025 in Q4 2024. Customer sign-ups and orders increased across all regions showing that TradeZone's growth was not limited to one region. Electronics generated the highest revenue and high spenders contributed the most.

KEY FINDINGS

1. Lagos made the most customers in 2024 with 146 new sign-ups and a 49% conversion rate within the first 30 days. This suggests Lagos is TradeZone's strongest market and deserves continued investment. *(Q1)*
2. Q1 2024 recorded the highest revenue growth at 1,394.96% compared to Q1 2023. Overall revenue grew consistently across all quarters showing healthy platform growth. *(Query4)*
3. Payment preferences vary significantly across states. Card dominates in Lagos, FCT and Rivers while Cash on Delivery is most popular in Kano and Oyo. TradeZone should adjust its payment options and promotions based on regional preferences rather than a one size fits all approach. *(Query6)*

RECOMMENDATIONS

1. Lagos is already performing well, so the Head of Growth should put more marketing effort and budget into Lagos to attract even more customers. Within 2 to 3 months this should lead to more sign-ups and more purchases from the Lagos market. *(Query 1)*

2. The Head of Seller Operations should make sure Cash on Delivery is always available for buyers in Kano and Oyo since that is what they prefer, while encouraging card payments in Lagos and FCT. This should reduce failed transactions and improve the buying experience across all states. *(Query 6)*

DATA QUALITY NOTE

Duplicate customer emails: 16 duplicate emails were found in the customers table but could not be deleted because those customers had existing orders. They were flagged and kept to avoid losing order records. If this decision was wrong and they are truly fake accounts, our customer count and conversion rates may be slightly overstated.

Order amount mismatches: 124 orders had differences between their total amount and the sum of their items, with gaps as large as ₦326,748. These were flagged but kept because the differences could be from discounts or delivery fees. If they are actually errors, our revenue figures could be slightly inaccurate.

WHAT THE DATA CANNOT TELL US

The current dataset cannot tell us why customers are dissatisfied or why they give low ratings. Leadership may need understanding of the most common complaints customers have but there is no complaint data available to answer this. TradeZone should introduce a customer complaint feature platform where customers can select from common complaint categories such as wrong item delivered, late delivery, poor product quality and damaged item, with an option to describe other issues not listed so they can express themselves. This data would help the Head of Growth and Head of Seller Operations identify and fix the most common problems customers face within a short time.
